

Nguyễn Đức Anh (Aldric)

Senior Full-Stack Engineer — TypeScript · Node.js · React · Web3

Backend-heavy full-stack engineer with deep Web3 experience. Building provider integrations, DEX/launchpad/NFT systems, and long-running on-chain flows on the exact stack L1.FI runs — Node.js/TypeScript, React + viem/wagmi, MongoDB, Redis, Kubernetes on AWS.

Remote · anhnd350309@gmail.com · github.com/0xaldric · linkedin.com/in/anhnd350309

Summary

Senior full-stack engineer with 5+ years shipping production backend systems and 3+ years building Web3 products end to end — DEX routing, launchpads, NFT execution engines, and cross-chain tooling. Comfortable across the exact L1.FI stack: TypeScript/Node.js, React with viem/wagmi, MongoDB/Redis, ethers.js, Docker/Kubernetes on AWS. Strong instincts around provider integrations, async flows, retries/idempotency, observability, and recovery — the exact failure modes a Checkout product has to absorb.

Experience

Senior Web3 Engineer (Freelance) · Independent

05/2025 — Present

Remote

Shipping production crypto products end to end across multiple teams — token launchpads, NFT execution engines, DEX and bridge tooling — on TypeScript / Node.js / React / Solidity.

- Buy launchpad — full-stack token launch platform on EVM with bonding-curve pricing, anti-bot guards, and partner-configurable rules. React + viem/wagmi on the client; Node.js workers on ethers.js; MongoDB + Redis for sessions, quotes, and idempotent state.
- NFT Strategy (nftstrategy) — automated NFT execution engine on top of Seaport/Reservoir with floor-sweep, strategy backtests, and robust partial-fill recovery. Lifecycle state tracked mempool → confirmation → reorg.
- Provider integration patterns — normalized DEX aggregators, NFT marketplaces, and price oracles behind a single client-facing API; absorbed provider-specific edge cases (rate limits, slippage drift, eventually-consistent quotes).
- Long-running flow hardening — idempotent quote refresh, webhook + reconciliation jobs, retry/backoff with circuit breakers, and on-chain recovery flows for stuck cross-chain transactions.
- Observability stack — structured logs, traces, and per-provider metrics dashboards; alerts wired to incident response.

Stack — TypeScript, Node.js, React, viem, wagmi, ethers.js, Solidity, MongoDB, Redis, Docker, AWS

Open-source Contributor · Mojave · 1sixtech

04/2025 — 07/2025

Remote · Open Source

Bitcoin / zk infrastructure — Rust workspace for full-node, sequencer, prover, and cryptographic utilities.

- Implemented block signing and verification (PR #17) — cryptographic identity guarantees for produced blocks.
- Built automatic ethrex upgrade tooling (PR #20) — keeping the workspace in lockstep with upstream changes.
- Worked across a multi-crate Rust workspace covering full node, sequencer, prover, and cryptographic primitives.

Stack — Rust, Cryptography, ZK, Bitcoin, ethrex

Senior Software Engineer · Topology Foundation

12/2024 — 03/2025

Remote (distributed: Germany · France · Korea)

Decentralized Realtime Program (DRP) — open-source primitives for real-time collaborative apps. Worked daily with teammates across CET (Germany, France) and APAC (Korea); standups, pair-programming, and on-call all built around a shared European afternoon overlap.

- Improved build processes and CI/CD workflows for the DRP runtime, supporting modular code evolution.
- Authored high-coverage test suites — lifted code coverage to 90% across distributed components.
- Integrated performance metrics for network latency and CPU time, enabling real-time profiling and observability in decentralized environments.
- Operated effectively across a CET/APAC team split — proof point for any EMEA-leaning role considering an APAC contributor.

Stack — TypeScript, Node.js, Vitest, GitHub Actions, Distributed Systems

Head of Engineering · AnyAxis Labs

02/2024 — 12/2024

Remote

Led the engineering org behind multiple Web3 products across the TON ecosystem — DEX, launchpad, and token issuance.

- AytuDEX — engineered algorithmic routing optimizations 50–100% faster than peer DEXes on the same pairs (directly applicable to bridge / DEX-aggregator routing logic).
- TonPad — designed launchpad smart contracts and system architecture: allocation, vesting, treasury, partner-configurable rules.
- Pump.fun-style platform — separated read / write / socket layers for predictable scaling under bursty long-running flows.
- Led a high-availability backend supporting 50,000+ active users at 99.9% uptime; standardized deploys, observability, and incident response on K8s.
- Built and directed a backend + blockchain team; owned hiring, technical roadmaps, and security posture.

Stack — TypeScript, NestJS, Solidity, TON / FunC, PostgreSQL, Redis, Kafka, Kubernetes

Software Engineer (Part-time) · WispSwap Lab

03/2023 — 01/2024

Remote

Off-chain infrastructure for a DeFi DEX — the same kind of provider/indexer layer that sits behind a Checkout product.

- Designed and shipped the off-chain indexing + quote service for WispSwap; operated services for ~20,000 users and 1,000+ concurrent on peak days.
- Built idempotent quote refresh, retry/backoff, and reconciliation against on-chain truth.

Stack — TypeScript, Node.js, PostgreSQL, Redis, ethers.js

Software Engineer L3 · Teko

12/2021 — 06/2023

Enterprise CRM and merchant tooling for a major retail tech group — production backend foundations.

- Built enterprise CRM apps on FastAPI, Elasticsearch, Redis, MySQL, and Kafka — cut API latency by 60% via targeted caching.
- Maintained legacy systems while upgrading with SOLID + design patterns; kept test coverage above 95%.
- Mentored four new team members through code reviews and on-the-job guidance.

Stack — Python, FastAPI, MySQL, Redis, Elasticsearch, Kafka

Skills

Languages

TypeScript, Solidity, Rust, Python, Go (learning), SQL

Backend

Node.js, NestJS, Express, FastAPI, microservices, REST, WebSockets

Web3 / on-chain

viem, wagmi, ethers.js, web3.js, Hardhat, Foundry, EVM, Solidity, TON / FunC, Sui, Solana

Frontend

React, TypeScript, Tailwind, viem + wagmi for Web3 UI

Data & messaging

MongoDB, PostgreSQL, MySQL, Redis, Elasticsearch, Kafka, RabbitMQ

Cloud & DevOps

Docker, Kubernetes, AWS, CloudFlare, GitHub Actions, GitOps CD, OpenTelemetry, Prometheus / Grafana

Integration patterns

Provider normalization, idempotent quotes, async retries, webhooks, reconciliation, recovery flows, circuit breakers

Selected projects

Buy launchpad (freelance) — Full-stack EVM token launch platform with bonding-curve pricing, anti-bot guards, and partner-configurable rules. React + viem/wagmi UI, Node.js + ethers.js workers, MongoDB / Redis state.

NFT Strategy · nftstrategy (freelance) — Automated NFT execution engine on Seaport/Reservoir: floor sweeps, strategy backtests, partial-fill recovery, mempool → reorg lifecycle tracking.

AytuDEX / TonPad / Pump.fun-style platform — Web3 systems shipped via AnyAxis Labs: custom DEX routing (50–100% faster), launchpad smart contracts, scalable token issuance with separated read/write/socket layers.

Mojave · Bitcoin / zk infrastructure — Rust workspace for full-node, sequencer, prover, and cryptographic utilities. Contributed block signing & verification (PR #17) and automatic ethrex upgrade tooling (PR #20). github.com/1sixtech/mojave

ts-drp · Decentralized Realtime Program — TypeScript runtime for decentralized real-time collaboration — contributed CI/CD, test infrastructure (→ 90% coverage), and performance instrumentation. github.com/0xaldric/ts-drp

Education

Hanoi University of Science and Technology (HUST) — B.Sc., Computer Science · 09/2017 — 09/2022

Achievements

- UAVS Hackatrix — Top 7, "Application for job management and salary payment" (07/2021)
- KPMG Challenge — solutions to help businesses overcome pandemic impact
- HackerRank — Problem-Solving Certificate
