Skills

- Blockchain | Evm | TON | Sui | Solana | [Nest.js](#) | Typescript | Python | C++ | MySQL | PostgreSQL | NodeJS | NoSQL | Git
- Cloud Computing | CI/CD | Kubernetes | Unit Testing | Integration Test | OOP | Kafka Apache | Docker | Github | RabbitMQ
- Management Team | Microservices | Distributed Systems | Backend | Smart Contract | Full-Stack | English | Telegram Bot

Experience

Senior Software Engineer

[Topology Foundation](#)
(closed)

12/2024 - 03/2025

- Planned and improved build processes for a Decentralized Realtime Program (DRP), enhancing CI/CD workflows and supporting modular code evolution.
- Developed and maintained high-coverage test suites, raising code coverage to 90% and ensuring robust validation across distributed components.
- Integrated performance metrics to monitor network latency and CPU time, enabling efficient profiling and real-time system diagnostics in decentralized environments.

Link: <https://github.com/Oxaldrich/ts-drp>

Head of Engineer

[AnyAxis Labs](#)

02/2024 - 12/2024

- Led development of a high-availability, scalable backend system supporting 50,000+ active users
- Assembled and directed a team of backend and blockchain engineers, focusing on blockchain smart contract integration
- Implemented microservice architecture, DevOps practices, and CI/CD pipelines, resulting in 99.9% system uptime
- Crafted technical roadmaps and strategies to ensure product scalability and enhance security measures
- Project:
 - TonPad launchpad in TON design smart contract logic, system design
 - AytuDex: Engineered innovative algorithmic optimizations, faster than other dexes from 50% to 100%
 - Pump.fun model: Developed full-stack ecosystem encompassing robust smart contract architecture, advanced system design, and multi-layered infrastructure with strategic separation of read, write, and socket components

Co-founder

[Vector](#)

04/2023 - 04/2024

- Co-founded Vector Education and led the development and deployment of Vector, an innovative educational publishing app available on Android and iOS platforms.
- Implemented server-side services and successfully onboarded 400 users onto the platform
- IOS: <https://apps.apple.com/vn/app/vector/id6450834400> , Android: <https://play.google.com/store/apps/details?id=com.app.vector>

Software Engineer (Part-time)

[WispSwap Lab](#)

03/2023 - 01/2024

- Designed and implemented an efficient off-chain system to enhance data processing and scalability within the WispSwap decentralized finance (DeFi) ecosystem.
- Managed backend service for a user base of 20,000, successfully scaling infrastructure to accommodate over 1,000 concurrent active users in a single day.

Software Engineer L3

[Teko Vietnam](#)

12/2021 - 06/2023

- Implemented enterprise applications for Customer Relationship Management using **FastAPI, Elasticsearch, Redis, MySQL, and Kafka Apache**.
- Implemented caching strategies to optimize API response times, reducing latency by 60%.
- Demonstrated expertise in maintaining legacy systems, upgrading codebase with solid principles, clean code practices, and design patterns while minimizing new code and achieving test coverage > 95%.
- Mentored and trained four new team members, including code reviews and on-the-job guidance.

Software Engineer, Intern

[Teko Vietnam](#)

04/2021 - 11/2021

- Build 2 core services in a microservice architecture using FastAPI, PostgreSQL, and Redis Caching with 500 users.
- Integrated multiple core services reduce the time to declare a merchant in VNPAY by 50%.

Software Engineer, Intern

VNIST

01/2020 - 01/2021

Education

Bachelor of Science

Ha Noi University of Science and
Technology

Ha Noi, Viet Nam

09/2017 - 9/2022

- Major in Computer Science

Projects

- **FastAPI Boilerplate:** FastAPI boilerplate using dependency, easy to test, link [GIT](#)
- **Telegram Bot Boilerplate:** Telegram Bot boilerplate using nest-js, separate module, maintainable link [GIT](#)

Others

- **UAVS Hackatrix:** Top 7 with topic "Application for job management and salary payment" (07/2021)
- **KPMG Challenge:** Help the business or industry overcome the effects of an epidemic
- **Problem-Solving Certificate** - Hackerrank
